

## Discharge MedRec MRP Key Points PAH - Go Live: January 16, 2018

### What is MedRec?

MedRec is a structured process whereby health care professionals partner with patients to ensure accurate and complete medication information is consistently communicated through all hospital transition care points (admission, transfer and discharge). The goal is to minimize discrepancies and avoid adverse drug events. This is an Accreditation Canada Required Organizational Practice and one of FHA's Top 6 Patient Safety Priorities.

**Discharge MedRec is completed to ensure that patients and their care providers understand their medications after discharge relative to their medications prior to admission. It is both a prescription and a communication tool.**

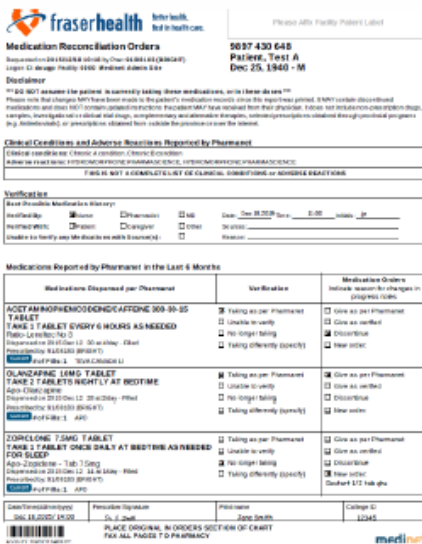

### MRP's Role:

The **MRP** is responsible for completing the MedRec Discharge Prescription at the time of the patient's discharge.

### BEST POSSIBLE MEDICATION DISCHARGE PLAN (BPMDP)

MRP accounts for:

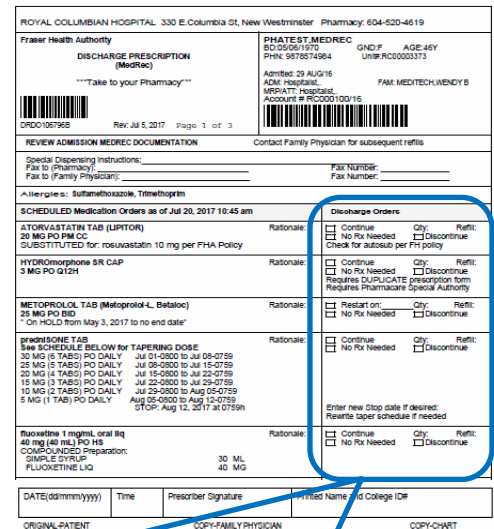

Inpatient meds to continue,  
discontinue, or change

New meds to be started post  
discharge

Stopped meds on the BPMH that  
should be restarted

Home meds discontinued in  
hospital and rationale

BPMDP is communicated to  
patient & next care providers
